Nguyễn Duy Thành

Web Developer

0964710577 nguyenduythanh1623@gmail.com https://nguyenduythanh-portfolio.vercel.app/

Nam Tu Liem District, Hanoi City

OBJECTIVE

Frontend Developer with 2 years of experience building scalable and user-friendly web applications using React.js / Next.js and modern frontend technologies.
Strong in state management (Zustand, TanStack Query, Redux Toolkit) and performance optimization. Experienced in delivering real-world products including 3D systems, real-time applications, and admin dashboards.
Seeking to contribute to a product-driven team while continuously improving technical expertise.

EDUCATION

Hanoi National University Of Education *2021 - 2025*

Bachelor of Science in Information Technology

SKILLS

Front-End (Primary):	• React.js, Next.js, TypeScript, JavaScript • State Management: TanStack Query, Zustand, Redux Toolkit, Redux • UI: Tailwind CSS, Shadcn/ui, Material UI, Ant Design
Back-End (Secondary):	• Node.js (Express.js, NestJS) • Databases: MySQL, PostgreSQL
Other:	• Git (GitHub, GitLab), Postman • English: Technical reading proficiency

WORK EXPERIENCE

Công TNHH Next Level Solution *09/2024 - Present*

Frontend Developer

Developed and delivered scalable, client-focused web applications using React.js, managing the full development lifecycle from concept to deployment. Collaborated with cross-functional teams to ensure high performance, usability, and timely delivery of multiple high-impact projects.

Project: SonHa Warehouse Management System (WMS) *01/2026 – Present*

This project is a warehouse management system designed to handle inventory data and import/export transactions. It provides comprehensive features for managing warehouse operations, document workflows, user accounts, and core product data.
Key functionalities include shipment verification and cancellation (incoming, outgoing, and transfer), as well as detailed tracking of transaction logs and user activity to ensure data accuracy, transparency, and traceability.

Responsibility:

- Developed reusable UI components such as tables, search forms, filters, and pagination. Built reusable components and hooks, reducing development time by ~30%
- Implemented responsive user interfaces based on Figma designs, ensuring a clean and user-friendly experience.
- Managed master data including products, product categories, warehouses, users, ... (CRUD operations, search, filtering, import, export).
- Display reports such as sent SMS messages, received SMS messages, customer reviews, daily transaction reports, and inventory reports (products, invoices, etc.).
- Implemented user management, including functional and branch-level access control.

- Collaborated with team members to analyze requirements, design system features, and propose technical solutions.

Teamsize: 8

Technologies used: ReactJS, Tanstack, Zustand, Formik, Tailwind, Shadcn,...

Project: 3D Planner *05/2025 – 09/2025*

Built an interactive 3D interior design platform that allows users to create and customize layouts by dragging and dropping furniture within a virtual environment. Implemented real-time 2D/3D rendering, project saving, and dynamic cost estimation to enhance user experience and decision-making.
Designed advanced features such as project saving, undo/redo functionality, and dynamic cost estimation to enhance usability and user experience. Developed a full-featured admin dashboard for managing products, users, and design projects, ensuring scalable data management and system efficiency.

Responsibility:

- Developed and maintained a 3D interior design platform.
- Built core features: save/load projects, undo/redo, 2D/3D previews, cost calculation.
- Optimized 3D rendering for smooth drag-and-drop interactions and fast loading.
- Created an Admin Dashboard for product, category, and price management.
- Integrated REST APIs and implemented route security(authentication).
- Delivered a responsive, user-friendly UI/UX for both customers and admins.

Teamsize: 6

Technologies used: Next.js, Blueprint3D, Three.js, Zustand, Tailwind CSS, Formik, Shadcn/ui,...

Project: Restaurant Management & QR Ordering System *10/2025 – 1/2026*

Built a real-time QR-based restaurant ordering platform that allows customers to scan codes, browse menus, place orders, and track order status instantly. Implemented an admin dashboard for efficient management of menu items and orders, along with real-time notifications to ensure seamless communication between customers and staff.

Responsibility:

- Developed a user interface for viewing menus, entering QR codes, logging in with accounts or Google, and placing orders.
- Developed the Admin Dashboard for menu management, order tracking, and table overview.
- Integrated frontend with backend REST APIs, Socket for menu, order, and notification data.
- Delivered a responsive, mobile-first design optimized for restaurant tablets and smartphones.

Teamsize: 4

Technologies used: NextJS, Zustand, Tanstack, Socket, React Hook Form, Zod, QR-Code, Tailwind, Shadcn,...

Project: NFT Market *01/2025 – 05/2025*

Built and delivered an NFT marketplace for an international client (Japan), enabling users to mint, buy, sell, and trade digital assets on the blockchain. Worked in a collaborative environment to implement secure smart contract interactions, ensuring transparent ownership and decentralized asset management.

Responsibility:

- Built reusable UI components (tables, filters, pagination), reducing development time for new features by ~30%. Built reusable components and custom hooks to improve code reusability and maintainability
- Implement wallet authentication and transactions between wallets.
- Create and manage user-owned assets and NFTs on the marketplace.
- Develop SDKs for wallet login, optional authentication, wallet balance checking, login verification, etc.
- Integrate blockchain networks and APIs
- Optimize the user interface/user experience to provide a smooth and seamless experience.
- Create documentation explaining functions/features

Teamsize: 6

Technologies used: ReactJS, Tanstack, Zustand, Formik, Tailwind, Shadcn, JS, CSS...

Project: CF House *10/2024 – 12/2024*

Built an admin dashboard for the CFHouse mobile application, enabling efficient management of content, users, and system configurations.

Responsibility:

- Built and maintained the admin dashboard to manage users, products, and services.
- Updated and managed promotions and discount codes.
- Implemented role-based access control and data security.
- Designed an intuitive interface to help administrators operate the coffee shop efficiently.

Teamsize: 2

Technologies used: ReactJS, Tanstack, Formik, Ant design,...

Project: Food Ordering Website *09/2024 – 11/2024*

A web application that allows users to browse food items, add them to cart, place orders, and manage delivery information. Includes an admin panel for managing products, categories, and orders.

Responsibility:

- Built the Admin Panel UI for managing food items, categories, and orders.
- Implemented cart management: add/remove items, update quantities, calculate total price.
- Designed a responsive layout with a clean and user-friendly experience.

Teamsize: 5

Technologies used: ReactJS, Tanstack, Formik, Ant design,...

CÔNG TY CỔ PHẦN KHOA HỌC & CÔNG NGHỆ GIÁO DỤC (OLM) *04/2024 - 08/2024*

Web Developer (ReactJS, NodeJS)

- Developed user interfaces using ReactJS
- Built basic CRUD APIs with Node.js
- Participated in bug fixing and feature enhancements
- Collaborated with team members to improve UI/UX

Technologies used: React JS/Express.js, Redux, React Router, Mui,...
